Skills

Languages: Python, HTML/CSS, JavaScript/Typescript, SQL, NoSQL, Java

Technologies: Git, React/React Native, Node.js, MySQL, MongoDB, Azure DevOps, SonarQube, Virtual Private Servers

Experience

Software Developer Intern, Provincial Government of Palawan

January 2024 – April 2024

- Led a team of two to create a queuing system for reducing long customer wait times.
- Developed a full-stack solution with Angular and NestJS, collaborated with stakeholders, and conducted user testing.
- Efforts resulted in an estimated reduced average wait times of 20%, and streamlined workflows with 10% more daily transactions processed.

Fullstack Developer, Ascendion

August 2024 – February 2025

- Optimized an existing feature to align with industry best practices, reducing initial load times by over 50%.
- Contributed to the development of a cross-platform booking engine, enabling integration across multiple systems and applications.
- Optimized development time by 20% by implementing a reusable coordinate-based logic for aircraft seat mapping, reducing the workload across 13 aircraft types and completing the feature one sprint ahead of schedule.

Projects

CodeWars Game | ReactJS, ExpressJS w/ Typescript, MongoDB, SocketIO

github.com/H-isaac23/CodeWars

- Lead a team of 8 in designing and implementing a full-stack game where players engage in coding challenges, fostering a fun and educational experience for users.
- Utilized SocketIO to enable real-time interactions between players, allowing matches to end up to 70% faster providing a more efficient gaming experience.

QR Attendance | Ionic React, ExpressJS, MongoDB

github.com/orgs/qrca/repositories

- Created an attendance app for Palawan State University, streamlining the attendance tracking process by allowing the students to scan a QR code to register their attendance, reducing manual errors and workload.
- Hastened the calculation of student fines by generating automated reports of every student's attendance which simplifies record-keeping and reduces time spent on analysis.

Thesis Summarizer | Python, PySide6, Langchain

github.com/H-isaac23/thesis

- Created a Python application utilizing LangChain to automatically generate concise summaries of PDF thesis documents, saving researchers and students valuable time and effort.
- Designed a user-friendly GUI with PySide6, enabling users to easily upload PDF documents and view generated summaries, enhancing user experience.
- Streamlined the research process by providing researchers with quick access to key information within lengthy thesis documents, leading to increased productivity and faster knowledge acquisition.

Education

Palawan State University – Bachelor of Science in Computer Science (**Magna Cum Laude**)

July 25, 2024

DOST Scholar - Merit
